Overview

The onchain home for real world assets.

About Plume

Plume is a public, EVM-compatible blockchain built for the next evolution of Real World Assets (RWAs). We're not just tokenizing assets — we're creating a seamless way to use them like crypto: stake, swap, lend, borrow, loop, and more.

By integrating institutional-grade assets with decentralized finance (DeFi) tools, Plume makes traditionally inaccessible assets — like private credit, ETFs, commodities — **permissionless, composable, and a click away.**

Our mission is simple: bridge traditional finance and crypto through **demand-driven adoption**, without sacrificing transparency, openness, or user experience.

CRYP2NOVA

Why Plume Stands Out

A thriving ecosystem:

- Over **200 protocols onboarded** and growing.
- Testnet success with **18 million wallets, 280 million transactions.**
- Partnerships with major institutions, distribution partners, and asset managers.

Designed for utility:

- Use RWAs like crypto-native assets across DeFi — stake, swap, lend, borrow, loop.
- Composable assets ready for lending markets, collateral, and complex strategies.
- Built to bring **new capital onchain every day** from the world's best funds.

The Future of RWAfi

Plume is more than a blockchain — it's an ecosystem designed for **RWA finance (RWAfi)** to thrive:

- Access assets previously out of reach: stake stables to earn yield from **Superstate, Apollo, Blackrock, Blackstone, Invesco, and more.**
- Loop, collateralize, and trade RWAs as easily as crypto tokens.
- Explore esoteric assets like **GPUs, uranium, mineral rights, durian farms,** and more.

Through phased onboarding, Plume ensures a **secure, scalable, and liquid** environment for users and partners — with each phase unlocking more use cases, assets, and DeFi integrations.

CRYP2NOVA

Built for Composability

At Plume, RWAs aren't just tokenized — they're made **composable and usable across the DeFi stack.** This unlocks:

- Yield stacking and leverage
- Integration with lending protocols
- Creation of new structured products

By bringing **the real world into crypto** (instead of the other way around), Plume opens new doors for builders, investors, and institutions alike.

Dive into RWAfi

Plume is building a **permissionless, transparent, and demand-driven financial system,** where anyone can access high-quality assets, trade freely, and innovate with new financial tools.

The future of RWAfi is here — and it's built on Plume.
