PrimapePrediction Documentation

Welcome to PrimapePrediction

PrimapePrediction is a cutting-edge multi-outcome prediction market platform built on blockchain technology. Our platform allows users to bet on the results of future events using a pari-mutuel model, where all losing bets are redistributed to the winning side proportional to their share of the winning pool.

CRYP2NOVA

Key Features

- Multi-Outcome Markets
- Pari-Mutuel Mechanics
- Adjustable Platform Fee
- Early Resolution & Claim Deadlines
- Claims and Batch Claims
- Unclaimed Funds Sweep

How It Works

1. **Creation:** The owner or market creators set up new prediction markets.
2. **Betting:** Users buy shares in their chosen outcomes.
3. **Resolution:** Once the outcome is known, the market is resolved.
4. **Claiming Winnings:** Winners claim their earnings before the deadline.
