Bringing autonomous AI agents to everyone — no code, no friction, just flows.

Welcome to the whitepaper for ***Project Plutus***!

CRYP2NOVA

Introduction

Welcome to the Project Plutus whitepaper.

Archived copy · cryp2nova.com

In the fast-evolving landscape of Web3 and DeFi, the opportunity to create and capture value has never been greater. Yet the tools required to participate — bots, dashboards, scripts, DevOps — are still fragmented, intimidating, or downright inaccessible to most.

Project Plutus exists to fix that.

We began as an AI-powered trading hub, helping users automate and optimize DeFi strategies with real-time agents — no code required. Today, we're expanding that foundation into something much bigger:

A modular, no-code automation platform for Solana, built for everyone.

From Trading Tools to Total On-Chain Automation

At the core of Plutus are AI-powered agents. These began as:

- Trading Agents — Executing strategies like DCA, spot buys, and LP optimization.
- Analytic Agents — Surfacing insights from token, wallet, and GitHub data.

We still support these today — and will continue to evolve them.

But we're now expanding their power with a full visual workflow builder, natural-language agent generation, and a composable automation layer that lets users:

- Launch new agents with just a prompt
- Visually adjust strategies using drag-and-drop nodes
- Monitor and manage deployed agents through a unified dashboard
- Browse, remix, and monetize agents in a shared on-chain store

Why This Matters

What started as an intelligent trading assistant is now becoming the Web3 equivalent of an automation OS — where anyone can describe what they want to happen on-chain, and see it come to life.

We’re still focused on wealth creation.
But now we’re expanding the definition — giving users the ability to automate not just trades, but opportunities, operations, and entire Web3 workflows.

One prompt. One flow. One agent.
Powered by AI. Run on Solana.

With $PPCOIN as the utility token fueling access, runtime, and the agent store, Project Plutus is setting the new standard for accessible, intelligent automation — and empowering a new generation of users to focus less on execution, and more on outcome.
