

PussFi

Introduction:

$PUSS is the first memecoin on Steemit, one of the largest blockchain-based social media platforms, powered by the Tron blockchain and backed by some of the biggest communities on Steemit, consisting of thousands of active users. **$PUSS** is more than just a regular memecoin; it's a utility token within the PussFi ecosystem, designed with a long-term vision and significant potential.

Created on the Tron blockchain through the SunPump platform, **$PUSS** offers investors various benefits, including extra earning opportunities on Steemit as bloggers, access to a more user-friendly DEX interface via SunSwap. Additionally, our roadmap includes plans to launch our own delegation service on Steemit, NFT marketplace and gaming projects within the **PussFi Ecosystem**, where **$PUSS** will serve as the native utility token. Furthermore, the deflationary coin model and LP buyback strategy are designed to ensure the sustainability of **$PUSS** in the long term.

Tokenomics:

CRYP2NOVA

COIN NAME: PUSS
TICKER: PUSS
COIN TYPE: TRC-20
BLOCKCHAIN: TRON
TOTAL SUPPLY: 1,000,000,000 PUSS
Coin on Tron:
https://tronscan.org/#/token20/TX5eXdf8458bZ77fk8xdvUgiQmC3L93iv7

Archived copy · cryp2nova.com

$PUSS is a decentralized memecoin launched through the SunPump platform, with no presale and zero team allocation. Being created on the Tron blockchain, it benefits from low gas fees, making it more user-friendly for regular and active users. In contrast to many recent VC-funded crypto projects with no utility and large team allocations that have performed poorly in the current market, **$PUSS** stands out among memecoins by offering a variety of effective, long-term utilities.

Roadmap:

Curation Service *(Q4,2024)*:

Over the past four years, we have invested 25 million $Steem, now valued at 4 million dollars. From these investments, **$PUSS** stakeholders receive bonus curation rewards on their blogs on Steemit, based on their staking amounts.

Delegation Service *(Q4,2024)*:

We offer our own delegation service on the Steemit platform. Our ongoing "Heroism" project distributes 100% of its curation reward revenue through **$PUSS**, ensuring continuous buying pressure on the token.

DEX Interface *(Q4, 2024)*:

We will provide an interactive DEX interface via SunSwap, aiming to go live in Q4 2024, which will be designed to offer a seamless and user-friendly experience for investors.

NFT Marketplace *(Q3, 2025)*:

In Q3 2025, we plan to launch our own NFT marketplace, where **$PUSS** will be used for minting and transaction fees. **$PUSS** stakeholders will enjoy exclusive perks, such as free NFT creation, discounted minting based on their staking amounts, and reduced transaction fees. Additionally, 100% of the protocol's revenue will be reinvested in the development and growth of **$PUSS**.

Crypto Games *(Q1, 2026)*:

We aim to launch our own interactive crypto game in Q1 2026, with **$PUSS** serving as the native utility token. Stakeholders will benefit from various privileges, including early access to the beta version during its launch.

Sustainability & Long-Term Growth

Dynamic Inflow into the Liquidity Pool:

5% of the income generated by bloggers, along with 100% of the income from official PussFi accounts, will be allocated to the **$PUSS** liquidity pool. This ongoing process will ensure a continuous inflow of funds into the liquidity pool, stabilizing and maintaining the reliability of the **$PUSS** price over time.

Buyback & Burn:

We have thousands of active bloggers across four of our communities on Steemit. With the help of our dedicated curators and staff, backed by 25 million staked **$STEEM** (Steem Power), authors consistently earn significant rewards. 5% of the income generated by bloggers in the **PussFi Community** on Steemit will be used to buy back and burn $PUSS tokens. Since the total supply of **$PUSS** is fixed at 1 billion, this ongoing buyback and burn mechanism will gradually turn **$PUSS** into a deflationary asset, driving its price higher in the long term.

User-Friendly & Interactive Website:

Website: https://puss.meme/

We have a user-friendly and interactive website that serves as a one-stop service for the latest updates and announcements. Investors can view real-time data, including live prices, market capitalization, liquidity, and more. Additionally, investors can seamlessly access the SunSwap DEX directly through our interface, providing a hassle-free experience.

Conclusion:

$PUSS stands as a unique and compelling investment opportunity, bridging the world of blockchain-based social media with the explosive potential of memecoins. Built on the Tron blockchain and supported by the active and engaged communities on Steemit, **$PUSS** offers far more than just speculative value—it provides tangible utility within the **PussFi Ecosystem**, from curation services to future innovations like NFT marketplaces and crypto gaming. With a clear roadmap, low transaction fees, and a deflationary model designed to reward long-term holders, **$PUSS** is well-positioned to thrive in the evolving cryptocurrency landscape. Unlike many other memecoins that lack utility or long-term vision, **$PUSS** is underpinned by real use cases and continuous buyback mechanisms that ensure a sustainable and growing demand for the token. The strategic allocation of 5% of blogger income and 100% of official PussFi earnings to the liquidity pool, combined with a robust burn mechanism, creates a stable and appreciating asset for investors. The **$PUSS** tokenomics are designed with a commitment to transparency and long-term growth, making it a standout project in the current market. By investing in **$PUSS**, stakeholders are not only gaining access to potential financial rewards but also supporting a thriving ecosystem with plans for continued innovation and expansion.
