🤖About Reform

Reforming the Market Making Industry

CRYP2NOVA

What is Reform?

Reform is the first market-making and liquidity-providing DAO, properly aligning incentives while offering boutique and tailored solutions to projects.

We're here to reform the landscape of market-making in Web3.

Why are we here?

Large, centralized entities possess exclusive market-making privileges inaccessible to smaller parties. Unfortunately, these large entities often exploit their advantages to the detriment of stakeholders and projects, as well as the ecosystem as a whole.

At Reform, we leverage advanced algorithms to provide and ensure equitable market-making. Through our services, projects are guaranteed more favorable terms, which benefits both the end-user and the project itself. Additionally, any net revenue generated from these transactions is used to benefit the DAO and its participants.

“Accessible, Transparent, and Equitable.”

Reform is committed to integrity, integrating advanced and transparent dashboards to foster an honest ecosystem. Our platform offers a decentralized and transparent alternative to the opaque and often-extractive market-making of our industry, allowing you to rest easy knowing (and verifying) that you're in good hands.
