Overview

Reign of Terror is an epic cyberpunk game world with multiple games all with $REIGN utility and different types of NFTs. Own and interact with in-game assets in various ways such as trading, ransoming, burning, and raiding. Through our game world and IP, we will bridge both the traditional gaming and web3 gaming worlds to create a huge ecosystem that will stand the test of time and bring continued benefits to the community.

Story

Set in a dark and dystopian alternate earth, Reign of Terror takes place in an extremely stratified society where equality is an unknown concept, and the strong prey on the weak. The environment is sacrificed for the sake of profit, and while those on top reap the benefits, those below receive no social support, creating a survival of the fittest society within vertical cities on a near ruined planet.

Future Metaverse Vision

Players interact with each other in a vertical cyberpunk world. Players show off their individuality in different gameplay modes to form stronger social bonds and gain fame (or infamy). Players have interdependence with each other in the RoT economy and can earn a decent living off of it. The Reign of Terror IP carries over to real life immersion and daily interaction through incorporating Augmented Reality. Bring items like weapons and other trophies into the real world.
