Suzaku Restaking (LRTs)

Earn Milk Points, Suzaku Points & be rewarded for validating Avalanche L1s

Yield Yak's Suzaku Restaking Vaults enables users to participate in Suzaku's decentralized marketplace for L1 economic security.

rsAVAX, rstAVAX, and rBTC.b

Deposit Token

- rsAVAX accepts sAVAX or native AVAX, rstAVAX accepts stAVAX , and rBTC.b accepts BTC.b. In return users receive a restaked version (rsAVAX, rstAVAX, rBTC.b) at a 1:1 ratio

Strategy

- The vault functions as Suzaku's first 'Curator'
- Deploys deposits on Suzaku's marketplace to provide cryptoeconomic security to Avalanche L1s.
- Yield Yak strategists manage deployment decisions
- Auto-compounds rewards back into the vault

Rewards

- Base native yield (in case of rsAVAX and rstAVAX)
- Benqi Lending Yield (in case of rsAVAX exclusively)
- Suzaku Points

Archived copy · cryp2nova.com

- Milk Points (see specific vault for multiplier)
- Future rewards from securing Avalanche L1s

Milk Points

Milk Vault deposits earn Milk Points, our system for tracking contributions to the Milk ecosystem. Earn at minimum 3 Milk Points daily for every $1 of value deposited. Milk Points receive monthly YAK token distributions at the start of every month.

Withdrawals

Users can request a withdrawal at any time and it will be automatically processed to their wallet within 30 mins. 5 minutes after withdrawal users can also manually complete the withdrawal from the UI should they wish to.

Risk Considerations

- Smart contract risks (Yield Yak and Suzaku)
- Rewards (not deposits) can be lost if operators that Yield Yak delegate collateral to suffer from downtime.
