Sigma Money: Pioneering Volatility Tranching on the BNB Chain

Sigma.Money is revolutionizing DeFi with a 100% on-chain and scalable solution for volatility tranching, powered by $BNB. It reinterprets the f(x) protocol model to adapt to a new ecosystem and utilizes BNB-native protocols like ListaDAO.

Key Features

- **Dual Tranching System:** Splits yield-bearing assets into:
  - **Volatile Tranche:** Retains price exposure and leverage.
    - High-leverage, funding-fee-free trading exposure via **xBNB** and **sBNB**
  - **Stable Tranche:** Focused on stable yield collection.
    - Real-yield stablecoin opportunities with **bnbUSD**

With Sigma's approach, risk and capital efficiency take on a new dimension in DeFi. Its innovative tranching mechanism allows both stability and upside potential to coexist in a single system, shaping a novel framework for risk assessment in the structured DeFi space.

Sigma Money is not just another DeFi protocol or yield farm. It offers a unique language for passive asset management through decentralized volatility tranching. Welcome to the next evolution in DeFi.
