Overview

Copy

Sixpack Miner is a community-driven fitness platform inspired by the Bitcoin economy that promotes healthier lifestyles by rewarding physical activity.

CRYP2NOVA

Project Description

Sixpack Miner is a **fitness finance platform** that creates a circular economy around a virtual mining machine powered by a unique energy source: **active energy**. By focusing on sustainability and clean energy, it combats physical inactivity while enabling athletes to monetize their burned calories.

On this platform, athletes become energy suppliers, using their daily burned calories to charge virtual Batteries. These Batteries power mining machines to mine SIXP, the platform's utility token, along with other green tokens, fostering a sustainable ecosystem.

Sixpack Miner has introduced the world’s first marketplace for athletes to trade their burned calories. It also offers opportunities for both **crypto and non-crypto companies** to create **Energy Clubs**, encouraging active lifestyles while taking on social responsibility and promoting products through sports and gamified rewards within a shared, thriving community network.
