NAV-Backed Token Incubator

Tokens have gone through multiple evolutions, from ICOs, DeFi, play-to-earn, NFTs and social tokens, to DAOs. Each cycle revealed the same truth: tokens succeed when they create utility, align contributors, and compound value over time.

Skycastle exists to apply these lessons. We are not a casino, a launchpad, or a fund. We are a network of founders, Partners, and advisors aligned through a single index token: **SKY**.

Our mission is simple:

- Incubate early-stage builders in exchange for 5% of token supply.
- Consolidate those holdings into NAV*.
- Reinforce a price floor with buybacks.
- Give every SKY holder exposure to the upside of the network.

When one project wins, every SKY holder wins.

**Net Asset Value (NAV) = market value of treasury (SKY + ETH + incubated token holdings) + open market positions*
