$SMART Whitepaper

The honest source of truth on what the SmartCodedBot studio token is, what it does, and what it does not. Every fact is verifiable on Base.

Chain Base Supply 100B fixed Launched 2026-05-17 Pool Uniswap V4 Creator share 57%

Abstract

$SMART is the studio token under the SmartCodedBot brand on Base. It launched as a fair, Uniswap V4 liquidity-bootstrapped ERC-20 with a 100 billion fixed supply: no team allocation, no vesting, no presale, no inflation. 57% of every swap on the SMART/WETH V4 pool routes back to a Bankr-managed escrow controlled by the studio operator wallet.

This is not a governance pitch dressed in token clothing, and not an agent-platform pitch dressed in token clothing. The studio ships products, those products generate trading volume and fees, and the fees flow to a fixed-supply token whose holders own the right to that flow over time.

The premise is that fee-bearing tokens with thin promises are honest. Fee-bearing tokens with thick promises are a trap. This document is closer to the first, and the dashboard at smart.smartcodedbot.com exposes the flow so it cannot quietly stop being honest.
