Spectre.ai Dividend Token Whitepaper

Spectre.ai is the world's first broker-less financial trading platform that allows traders to trade directly against the financial markets without the presence of an intermediary broker. By utilizing cutting-edge, crowd-sourced technology, Spectre.ai matches traders against an embedded liquidity pool or other traders on the Spectre platform. 24 hour liquidity and zero-opportunity for broker fraud is ensured in this unique model!

NO BROKER
Using unique crowdsourced technology traders can trade directly against Spectre's pool of liquidity or against other traders directly. In the Spectre.ai trading universe, there is no shady broker, just a set of audited, secure smart contracts that rest on a global blockchain and ones that govern all trade transactions, outcomes and payouts. 100% transparency, pure trading, no fraud.

NO DEPOSITS
Unlike traditional binary option or FX brokers, where you are required to deposit USD/EUR or another fiat currency at their bank account in order to start trading, Spectre.ai offers a revolutionary leap forward in technology which means you can trade straight from your own supported digital wallet or from a secure portal on Spectre.ai. While many brokers make money when you lose, Spectre.ai simply earns a volume based technology fee when you trade. Spectre.ai has no pesty account managers or sales people. See how Spectre.ai's fees stack up to competition here.

STATE OF THE ART VERIFICATION
In a traditional trading scenario, whether it's binary options or FX, the settlement happens behind the curtains and at times, doesn't even happen. At Spectre.ai, every trade transaction is mined and settled on a transparent digital ledger or aggregated every 24 hours and sent to a public digital ledger for verification. A growing network of processing nodes (over 20,000) around the world will confirm the trade entries and exits (using independent 3rd party verification of entry and exit prices) along with debits and credits to trader accounts. This is the first trading platform in the world that offers a globally based audit trail.

UNIQUE CONTRACT RANGE
Spectre.ai is the first platform to allow retail traders to trade Smart Options, a new trading contract-class with a verified outcome resulting in payouts of up to 200%, within just minutes. Smart Options can be traded on a range of assets including traditional currency pairs, and other assets too. Last but not least, Spectre.ai also offers traditional A-Book FX trading. Take a look at our fee schedule here relative to competition and our total contract range here.
