The Three Stooges on Solana

Stooges ($STOG coin) was born as a criticism of the current crypto world. A totally ridiculous coin that's shaking up the crypto world with a pie in the face. Inspired by the legendary Three Stooges, this coin is here to prove that not everything in life has to be serious. It's fast, it's silly, and it's on Solana, because... why not?

The meme is based on a portrait of what the crypto industry is like today, on the one hand, there is CZ, martyr of the crypto industry, a visionary and leader who has allowed the cryptocurrency sector to be what it is today. On the other hand Moe, a dev who doesn't even know how to deploy a token and who leads the project (like 99% of coins), and then Sam, a person who well... we better not talk about him.

If you're tired of those boring coins that promise the moon and stars but only give you charts and more charts, it's time to join us. Stooges.io isn't just a coin, it's a joke you can buy, sell, and most importantly, share!
