Introduction

Copy

What if we all held?

Streamlock is a token launchpad where **all** tokens are locked until price targets or time conditions are met. No more worrying about your bags getting rugged and portfolio decimated in a week.

Why Streamlock?

For Holders

- **Anti-Rug Mechanics**: You can actually buy and go to sleep. No surprise dump or rug. Literally.
- **Fair Distribution**: Anti-whale limits ensure no single buyer dominates the market. No need to fear bundled farms.
- **Holding and bagworking pays off**: No more jumping from a shitter to shitter. Bagwork for your bags and everyone wins together.
- **Zero-Sum Gaming**: Instead of drawing lines and playing candlesticks, play games to claim rights on others' locked positions.

For Token Creators

- **Build lasting community**: Rest assured that every token buyer of yours shares your vision and will bagwork with you.
- **Built-in Vesting**: Price/Time-gated unlocks align holder incentives with token success.
- **Two Launch Modes**:

Archived copy · cryp2nova.com

- **Siren**: You set the target price for all buyers
- **Ulysses**: Each buyer sets their own target price
- More coming soon.

TLDR

```
1. BUY     →  Tokens locked in escrow during GRIND phase
2. GRIND   →  Community grinds price toward the milestone
target
3. FREEZE  →  Target hit! Pool freezes — no selling
4. UNLOCK  →  Unlock window opens — sell with decaying fees
              (then new target is set, cycle repeats)
```
