Disclaimer

Important information is attached to the disclaimer so please read it carefully.

1 This white paper is intended for reference and has not been reviewed or approved by the relevant authorities to provide the information that the SUT project team is planning. This white paper is for information purposes only and is not solicitation or advice on laws, taxes, finance, accounting, regulation, etc., nor is it intended to induce the purchase or sale of coins or tokens, or to provide a basis for transactions. Please note that the purchase of coins and tokens will require you to consult with experts in law, tax, finance, accounting, regulation, and determine the potential benefits and possible burdens and other adverse consequences of these transactions and may require you to take economic risks for unpredictable periods.

2 The statements and information contained in this White Paper are not current and are predictive of the future. Please note that these forward-looking statements and information are uncertain to contain known or unknown risks and that the actual results may differ materially from the results of participants' speculation from the statements or information in the White Paper or from the results implied or indicated by the White Paper.

3 This white paper complies with the Korean Capital Markets Act and the Virtual Asset User Protection Act, and does not have the effect of legally binding the SUT project team. This token does not grant direct beneficiary rights or equity rights to specific assets and is a utility token for the use of services within the platform. The SUT is not intended to distribute profits according to the efforts of the issuer and is defined as a tool for using services within the platform. Through the review opinion of the law firm, it was confirmed that it does not correspond to investment contract securities under the Capital Markets Act. The gold exchange service linked with the SUT does not tokenize ownership of assets, but is a device for granting payment methods and benefits when using the platform, and specifies that it has no right to receive dividends from specific businesses and is only a right to use services within the platform. The SUT project team complies with the FIU's guidelines and thoroughly implements anti-money laundering and anti-terrorism regulations.

4 Members of the SUT Project Team do not guarantee the accuracy, reliability, etc. of the White Paper or are liable for any consequences. The SUT Project Team may modify, add or delete part of the White Paper for any reason or at any time.

5 Participants in SUT token transactions shall not provide, distribute, resell, or transfer SUT tokens to citizens, natural persons, or corporations (hereinafter referred to as "participation restrictors") in the region where laws, policies, etc. of the State prohibit or restrict digital token transactions. Therefore, participants are not allowed to participate in the transaction of tokens related to this white paper. Please note that any responsibility arising from the intervention of the participant restriction rests with the participant restriction or the person who provided, distributed, resold, or transferred it to the participant restriction.

Overview

Overview of the SUT Project

Archived copy · cryp2nova.com

SUPER TRUST

No SUT held for casting gain purpose (Zero = 0%)

SUT tokens issued by MUST COMPANY SG PTE. LTD., Singapore's overseas unit, totaled 238,403,732 issued 50,000,000 units were incinerated and the current distribution volume is 188,403,732 units 100% distributed. Therefore, the operator there is no SUT for the purpose of casting gains held by the foundation, it is zero. The SUT boasts 100% transparency that does not allow unscrupulous behavior by the foundation. In addition, the distribution is extremely small.

Since all of the issued SUTs are in circulation, the holders' stake in the SUT is confirmed. It is difficult for platform operators to adopt it as a payment coin because the distribution volume is likely to increase because the foundation holds the volume for profit, but SUT can be adopted as a payment coin with confidence because the distribution volume does not increase anymore.

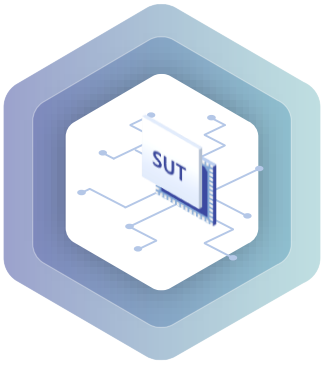

Global Blockchain Gold-Backed Utility Ecosystem

Creating a physical economic platform is a challenge.

SUT GOLD Connect 2026 It is the most stable gold trading ecosystem that provides online and offline benefits for gold, a global safe asset, as of this white paper 5.0.

Next-generation video production infrastructure in line with the era of AI STUDIO 48 / Global blockchain real economy platform MOAD / Global real-time natural drawing platform NATUREBOOK / Low-budget movie OTT platform ZEROPLUS / Leisure reservation platform L2U (Leisure to You) was conducted to contribute to the benefits of users by linking with gold trading platforms in the future.

The SUT token is an Ethereum Layer 2 Polygon network-based token. With its stable, fast transfer rate and low commission, it has the best conditions for payment coins.

Real Economy Platform Online Payment Token SUT (Super Trust Token)

SUT tokens issued by MUST COMPANY SG PTE. LTD., Singapore's overseas subsidiary, totaled 238,403,732 issued and 50,000 were incinerated, with a current circulation of 188,403,732 in 100% distribution. Therefore, there is no SUT for the purpose of casting gains held by the operator's foundation and it is zero.

SUT is used for online payments on the launching blockchain-based real economy platform.

In Korea, we contribute to the purchase of SUT live-action purchases by applying an exceptional discount of 30% to 50% on the platform usage fee directly operated when paying for SUT coins.

02
Background

The Shadow of the Crypto Industry

Archived copy · cryp2nova.com

The shadow hanging over the rapid growth of the cryptocurrency industry

In general, the entity responsible for the issuance and operation of tokens, or coins, is called the foundation. The Foundation will secure funds for the project through the issuance of tokens or coins, the White Paper, which contains plans for the project, and the disclosure of cryptocurrency (ICO). With the funds secured, the foundation will proceed with the project that will be the use of future coins. If the projects disclosed in the white paper go smoothly as planned, the owners of the coins purchased will be compensated for the increase in assets due to the expected increase in prices.

However, that is not the case in reality. Most foundations, excluding a few, are often seen to commit immoral acts for the purpose of not carrying out the plan for the project disclosed in the white paper with funds for the secured project or for the purpose of preventing the project from being carried out in the first place. It is common for so-called "scam“ coins to be bought and the purchase of coins to lead to a 100% loss. Therefore, it is necessary to determine whether the content of the project initially disclosed in the white paper is feasible and whether there is a principle and structure in which the coin can actually be used.

Even if the business goes well, there is another problem. The amount of coins held by the foundation in which the coins were issued will be distributed to the market at any time, increasing the volume of distribution and decreasing the share ratio of the holders held by the coins. In other words, many foundations with the largest volume are being sold on the exchange in the name of the use of additional business funds. That's why it is ironic that coin holders are sold out on the day they are listed on the exchange. As published in the White Paper, the confidence that the project will go well has long disappeared, and the foundation intends to sell its supplies before they are sold.

Due to the foundation's immoral behavior, compliance with the thorough distribution plan has been recommended and monitored on the recent stock exchange. However, there is no law on the business rights of cryptocurrency, so there is no way to prevent the increase in the distribution volume of the foundation's goods.

It is true that it is not easy to make profits from coins, with the business usually disclosed in the white paper waiting for a short period of two to three years, and the foundation having to endure the immoral act of selling additional supplies.

The problems mentioned above, which are emerging with the development of the cryptocurrency industry, must be solved to be reborn as a sound and attractive market.

Our Mission

A New Ecosystem with Blockchain

Archived copy · cryp2nova.com

Transparency SUT

Total amount issued

238,403,732

Distribution volume

188,403,732 (Sale 100%)

The foundation's holdings 0(Zero)

Burn Amount 50,000,000

It is issued by MUST COMPANY SG PTE. LTD., an overseas subsidiary in Singapore SUT, The total number of SUTs issued is 238,403,732, and 50 million have been incinerated, and 188,403,732 are 100% in circulation. Therefore, there is no SUT for the purpose of casting gains held by the company. There is no increase in distribution volume when listing on the exchange, and other coin foundations generally secure additional business funds by selling the cutting volume by circulating the cutting volume on the market. It is common to have the largest number of coins issued by the foundation, and coin holders also tend to recognize the foundation's holdings to secure funds for the business process. However, reckless and immoral sale of cutting volume should be eradicated in the future.

It is difficult for real economy platform operators to adopt coins with a large amount of foundation for the purpose of minting profits as payment coins. This is because there is no alternative to the decline in asset value if the coin foundation sells additional coins on the exchange to secure business funds due to the operation of the platform.

Since the SUT has zero cutting reserves for the purpose of casting gains, there will be no increase in distribution in the future. Operators can adopt the SUT as a platform payment coin that directly operates the SUT with confidence. In addition, SUT, an Ethereum (ETH) Layer 2 Polygon network-based token, boasts very high transmission speed and low transmission fees. It is perfect for use as a global payment token.

Sustainability

- SUT Global Blockchain Real Economy Platform Interworking
- Real economy platform payment token with intrinsic value

SuperTrust is a foundation that operates in conjunction with the SUT and is a real economy platform startup company. SuperTrust's own business continuity model is required to conduct business in a state of 0 (zero) SUT in cutting capacity.

The primary objective of SuperTrust's establishment is not the pursuit of profits from SUT selling. As a result, the majority of the surplus funds generated by the real economy platform maximize the development and platform advancement of the real economy platform to provide high-quality services to platform users.

Since SuperTrust is a global blockchain real economy platform company, it expands its business site and raises manpower along with rising sales.

Instead of manufacturing and distribution businesses where operating profit is relatively flat due to increased spending, it is a real economic platform business that maximizes sales growth and operating profit at the same time. The drastic development investment of operating profit and expansion of operating infrastructure that grow along with sales lead to a virtuous cycle of providing high-quality services to platform users. When it is linked to a real economic platform and adopted as a payment token, intrinsic value is generated.

It will be the first of 30,000 coins in the world to directly develop, launch, and operate a real economy platform, and if you adopt SUT as a payment token and pay for the platform with SUT, it will provide exceptional and bold discounts of 30 to 50%, creating an environment in which users have no choice but to use SUT.

Profitability

Real Economy Platform Earnings

It operates its business with the financial resources of business revenue through the global real economy platform. SuperTrust is a platform startup company that directly plans, develops, and operates real economy platforms. SUT's mission is to participate in platforms that own gold, the most stable value measure in the volatile cryptocurrency market, on better terms than the market price.

- Volatility hedging : Users can use SUT within the platform to secure real money or use related services on favorable terms compared to the gold price.
- Generating real demand : Form a firm buying spree to secure real assets, not speculative demand, and maximize the intrinsic value of the SUT ecosystem.

The company plans to use the gold trading platform in the first half of 2026, and will be able to continuously expand and operate its business by using the sales of the global direct advertising platform MOAD, global real-time natural drawing platform Nature Book, leisure membership sharing platform L2U (Leisure to You), and low-budget commercial film OTT platform ZEROPLUS.

Archived copy · cryp2nova.com

Global Direct Advertising Platform

MOAD

MOAD eliminates commissions from intermediate advertising brokers and realizes reasonable advertising costs through direct advertising contracts between advertisers and advertisers.

MOAD is leading truck advertising nationwide based on its creative and professional organization in line with rapidly changing times. By providing advertisers with higher value advertising media, we increase the growth of advertisers (customers) and brand image value. In addition, by identifying and analyzing the NEEDS of advertisers (customers), we provide the service that advertisers (customers) want through innovative truck advertising.

Advertising publishers (users) can receive additional revenue rewards through direct contracts with advertisers (customers).

MOAD starts with commercial truck and wing body vehicle advertisements nationwide. A large database of commercial trucks and wing bodies nationwide has been secured. Starting with this, we plan to expand to all advertising sectors such as domestic and global outdoor advertising.

It is equipped with a cryptocurrency payment system in the mode platform to provide a 30% to 50% discount on advertising execution costs when paying with SUT.

MOAD Truck Advertising

- Attaching customer advertisements to the side of the truck to provide advertisers with low-cost and efficient advertising effects
- Provide fixed income to car owners to provide services for advertisers and car owners to win-win
- Liquidity that can be used to provide various information, such as corporate promotion, product promotion, and local government policy promotion
- Compared to other outdoor advertisements and transportation advertisements, it is more efficient in terms of cost and exposure

Cryptocurrency Payment

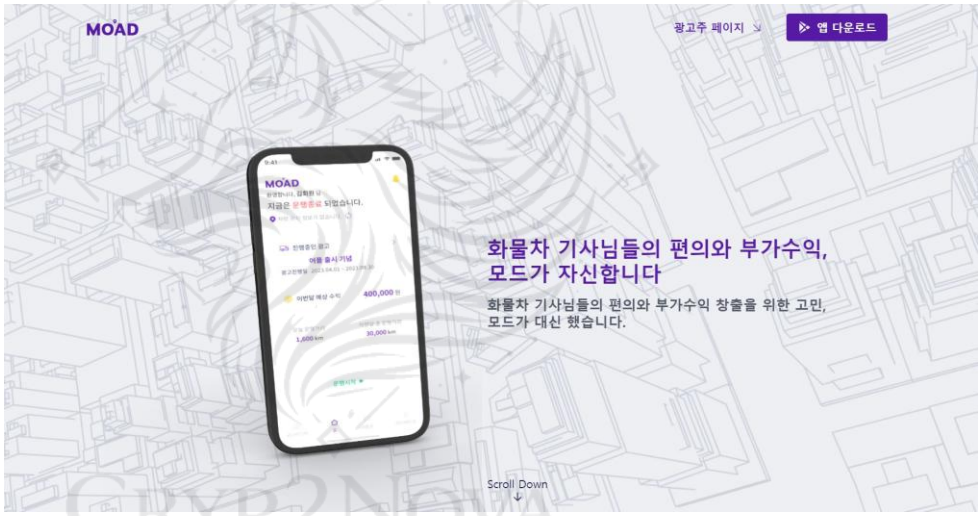

- 30% to 50% discount on advertising execution costs for SUT payment

Global real time natural drawing platform

Nature Book

NatureBook is a global real-time natural drawing created by users who love nature around the world. Global users share beautiful natural scenery, flowers, and plants in their respective areas so that users around the world can enjoy them.

It allows you to feel the nature of the Earth by continuously updating photos and videos taken in the present, not the past, and in real-time. All users around the world support saving, protecting, and protecting the Earth's nature.

NatureBook Platform

- Platform user's ability to share natural scenery
- Platform user expandable
- Proceed with advertising within the platform to generate revenue

CryptocurrencyPpayment

- Pay for paid services with SUT coins

CRYP2NOVA

Our Mission : Global user's view of nature around the world

Global Users

Share the Nature of the Earth with users all over the world

You can share and appreciate the beautiful nature of the earth in real time, not in the past.

Compensation

Share nature, earn rewards

Share the beautiful nature of the earth.

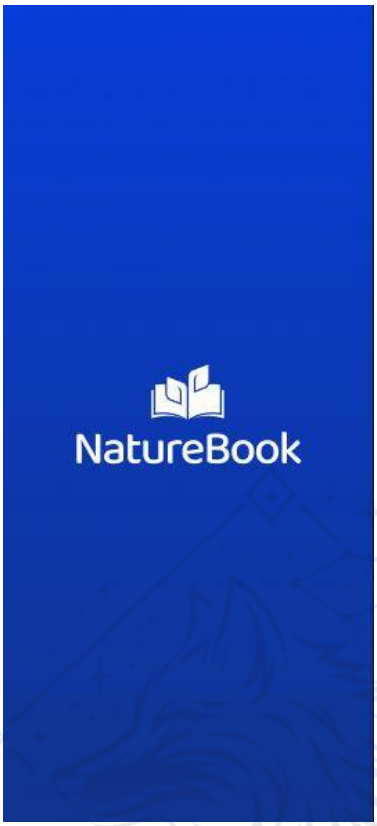

Earth Protection

Let's Protect the Earth!

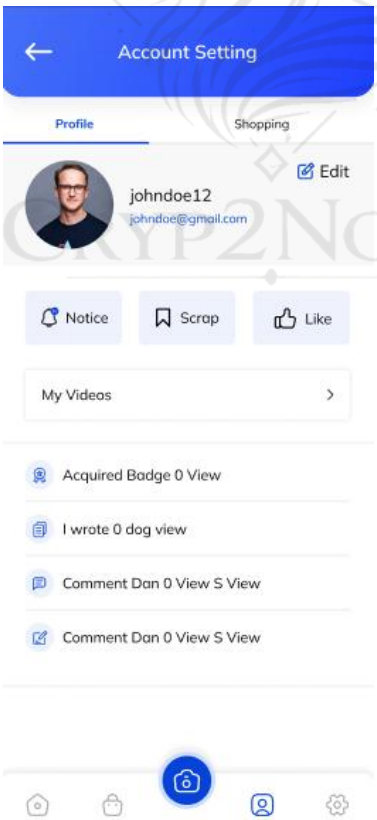

Let's protect the endangered nature of the Earth.

Global Blockchain Credit Trading Platform

DeCT SUPER SAVE

***DeFi (decentralized finance)**

DeFi (Decentralized Finance) refers to an ecosystem that utilizes blockchain technology to provide financial services without intermediaries (banks, governments, etc.) in traditional financial systems. It mainly operates on blockchain platforms such as Ethereum, and through smart contracts and decentralized applications (DApps).

- Key Features of DeFi
1. Smart Contract: Automatically execute transactions without intermediaries.
2. Decentralized Exchange (DEX): Allows users to exchange cryptocurrencies without leaving funds to third parties.
3. Financial Services: providing a variety of financial functions, including loans, insurance, investments, and asset management.
4. Transparency: All transactions are recorded on the blockchain so anyone can check it out.

***Staking**

Staking is an investment method that deposits cryptocurrency held in a PoS-style blockchain network, and is rewarded by participating in network operation and verification. It is similar to a bank's deposit, but it is differentiated in that it contributes to the security of cryptocurrency networks and the creation of blocks.

- How Staking Works
1. Users deposit certain cryptocurrencies in a blockchain network.
2. The network validates transactions and creates new blocks based on deposited assets.
3. Payment of cryptocurrency rewards in exchange for contributing to verification work.

***DeCT (Decentralized Blockchain Credit Transactions)**

DeCT stands for Decentralized Credit Transaction, a decentralized blockchain credit transaction system.

- Key Features of DeCT
1. Blockchain-Based: DeCT enables various credit transactions using blockchain technology.
2. Decentralization: Participants engage and validate transactions directly without central authority.
3. Trust verification: The transaction is completed after participants verify their trust on their own.
4. Transparency: Due to the nature of the blockchain, all transaction records are publicly verifiable.
5. Global Access: DeCT systems can provide globally accessible services.
6. Preserving Asset Value: It can help maintain asset value in response to inflation-induced currency depreciation.

Global Blockchain Credit Trading Platform

DeCT SUPER SAVE

DeCT SuperSave aims to increase users to spread the ecosystem of SUT's real economy platform and expand the actual use of SUT, a payment method. Like Kickstarter, where many users benefit from the initial purchase price of coins cheaply before the product comes to the market, the purpose of the SuperSave platform is to allow users to participate in B2B transactions, which are difficult for individuals to participate in, in the form of a group through SUT coins, so that they can enjoy wholesale benefits. Users who use SUT tokens can conveniently participate in the transaction platform through SUT coins, and the transaction details are transparently disclosed on the blockchain. SuperSave is a B2B2C platform that allows people to participate in gold purchases through SUT among SUT real economy platforms.

① Gold is a concept of a good whose price changes every day due to its nature.

② Gold is only officially available for wholesale transactions through the gold exchange. However, regular users are not allowed to participate in wholesale transactions.

③ In order to conduct wholesale transactions on the gold exchange, capital and margin of purchase are required, and when SUT users apply for consignment purchase of gold to the gold exchange, the gold exchange has the consignment rights and generates profits through wholesale or retail transactions.

④ The gold exchange has the advantage of establishing a long-term plan at the time of buying and selling gold based on entrusted rights.

⑤ Since the gold exchange establishes a six-month implementation period for consignment purchases, and users have a promised time to receive gold during this period, there is a staking effect in which the gold exchange can enjoy the benefits of wholesale transactions.

⑥ When users participate in consignment purchases, some of them are used on the gold exchange platform through SUT, and gold is traded wholesale/retail on the blockchain.

Archived copy · cryp2nova.com

Global Blockchain Credit Trading Platform

DeCT SUPER SAVE

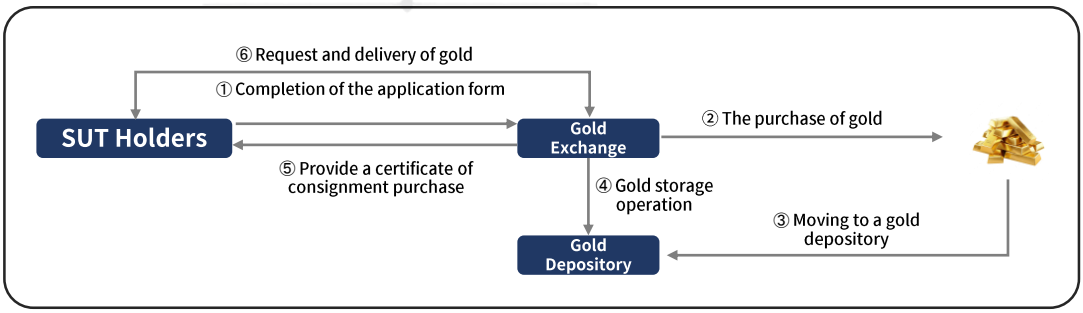

- The purchased physical gold is safely stored separately in gold exchange vaults or in separate storage, and can be delivered and received directly after six months, the physical risk management period for overseas mining and domestic smelting processes resulting from physical withdrawal.

- Holds the right to transfer bonds that the buyer may have prior to the physical delivery period and provides the contents of the regular due diligence report.

- Strictly separates the accounting and operations of SUT's marketing agency RiseUp from physical trading entity Muskdas Gold Exchange.

Gold exchange Contracts for companies with full licenses on the Gold Exchange
Muskdas Gold Exchange: Corporate Name Modoo Networks Co., Ltd
Business number: 214-87-63435

SUT Utilization Entrust Flow

Legal Issue

- Profit distribution NO: Do not distribute foundation profits to holders
- Voting rights NO: No direct equity interest in business operations
- Use and consumption YES: Payment and discount of service usage fees within the platform
- Asset Exchange YES: Used to purchase real gold
- SUT functions as a service right within the platform, not as an investment that promises to increase the value of assets, which clearly meets the non-securities nature of the financial authorities' token securities guidelines.
- A consigned gold exchange (Muskdas) does not represent direct ownership of gold assets and is a utility service license that benefits from the purchase of gold.
- Users will be notified in advance of the possibility of changes in the value of the won due to fluctuations in the gold market exchange rate.

Type	Form
STO	We have the right to distribute profits, we have the right to share
SUT	No revenue distribution rights, only service discounts and vouchers exist

Global Blockchain Credit Trading Platform

DeCT SUPER SAVE

[SUT X Muscdas Terms and Conditions for Real Gold Purchase Service]

Article 1 (Purpose)

The purpose of this Agreement is to prescribe the rights, obligations and responsibilities of the Company and its users in using the physical gold advance sale and consignment purchase service (hereinafter referred to as the "Service") provided by the "Muskdas Gold Exchange" (hereinafter referred to as the "Company").

Article 2 (Characteristics and Restrictions of Services)

This service is a 'real sale contract' in which the user entrusts the purchase of real gold in a pre-payment manner. This service is not an investment product that guarantees monetary returns above the principal under any circumstances, and has nothing to do with investment in securities-type tokens or virtual assets. This contract specifies that it is a sales contract for the purpose of delivering real gold.

Article 3 (Utilization and Value Calculation of SUTs)

The SUT transmitted by the user is only used as a "discount certificate (coupon)" to receive price discounts when purchasing real gold.

The SUT received is received by the event organizer Rise Up in exchange for fees and promotions for marketing services and is incinerated or deposited in accordance with the operational policy.

The value of the SUT for discount application is calculated based on the 24-hour average price of listed exchanges just before the time of payment, and changes in the market price of the SUT after payment do not affect the amount of discount already established.

The received SUT itself is not refunded in cash.

Article 4 (Payment and Delivery)

The actual gold purchase price (cash) must be deposited into the 'Muskdas' account, and the SUT must be sent to a separate guided wallet to apply the discount.

The delivery of real gold will be carried out sequentially six months (180 days) after the completion of the payment. Delivery may be delayed in the event of force majeure reasons such as sudden fluctuations in the international gold market, delays in import customs clearance, and natural disasters, in which case the company notifies you in advance.

Archived copy · cryp2nova.com

Global Blockchain Credit Trading Platform

DeCT SUPER SAVE

[SUT X Muscdas Terms and Conditions for Real Gold Purchase Service]

Article 5 (Withdrawal and Refund of Subscription)

This contract is a "order-made pre-sale contract" in which the volume is allocated based on the market price at the time of payment, and cancellation or refund by the user's simple change of mind is absolutely impossible after payment is completed.

However, only if the actual delivery status is confirmed due to reasons attributable to the company, the refund process will proceed based on the amount of KRW paid.

Article 6 (Commerce support for user convenience)

If users need to pay or want to transfer their rights during the six-month delivery period, they can transfer their right to claim payment to others through the Company's Inter-user Bond Transition Support and Notification Agent Service. At the time of transfer, both the transferor and the transferee must pay the SUT as an agent for notifying the transfer of bonds and using the electronic signature system (providing administrative services), and it takes effect only after the notification process for the transfer of bonds through electronic signatures is completed. This bond transfer support service only technically supports the transfer of rights according to the user's personal circumstances that occur during the physical period of real gold delivery, in accordance with Article 450 of the Civil Code, and the company does not in any case guarantee the value of the delivery claim or broker the sale as a virtual asset. If the above items become problematic, you can receive support from the virtual asset exchange that has been licensed by the FIU.

Article 7 (Personal Information Protection and KYC)

To prevent illegal transactions and voice phishing, the company conducts a depositor identification (KYC) process. In accordance with the relevant laws and regulations, customer information is kept as follows and destroyed without delay after the expiration of the period. In addition, any personal information will be destroyed immediately when the purpose is achieved.

Contract or subscription withdrawal, payment and goods supply records: 5 years
Record consumer complaints or disputes: 3 years
Display/Advertising record: 6 months

Article 8 (Other)

This Service is deemed to have fully recognized and agreed that the value of real assets at the time of delivery may change depending on international gold prices and exchange rates.

Low-budget commercial film OTT platform

ZERO PLUS

ZERO PLUS is a new paradigm platform for low-budget commercial film OTT channels by solving structural problems and opening up new possibilities in the existing film industry. As films of various genres and styles produced on a low budget can be screened, it is an OTT platform that promotes diversity and creativity in the film industry so that creative projects can be realized by allowing film production and distribution without large-scale capital. In the future, we plan to establish a place for low-budget commercial films and independent films through the hosting of the Zero Plus Film Festival and Awards.

Our Mission : Low-budget commercial film OTT platform

Improved accessibility
Provide low-budget and independent filmmakers with access to a wider audience

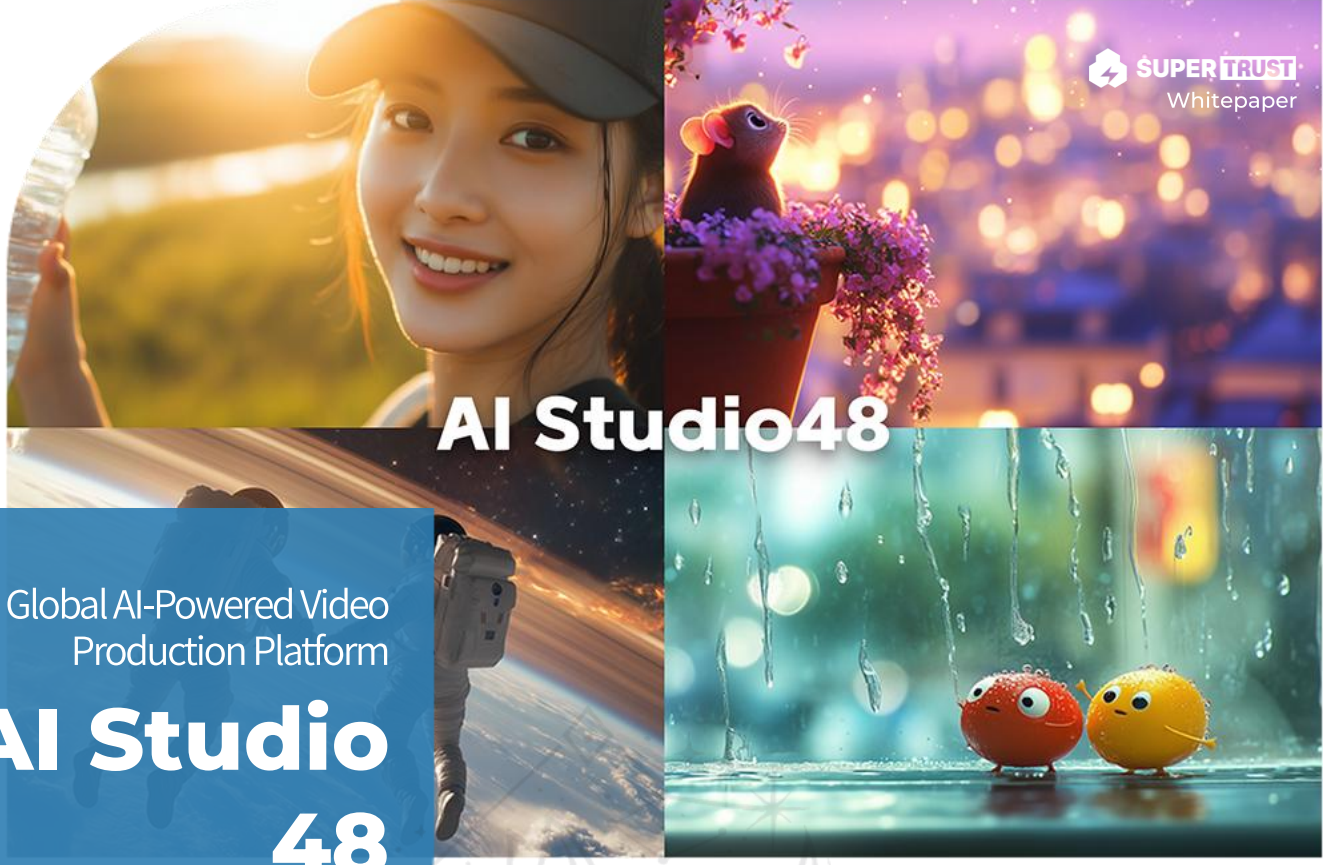

Promote diversity
Films of various genres and styles are shown
Promote diversity and creativity in the film industry

Cost efficiency
Lower marketing and distribution costs compared to theatrical release
Increased distribution flexibility

Archived copy · cryp2nova.com

Global AI-Powered Video Production Platform

AI Studio 48

AI Studio 48 integrates advanced artificial intelligence across the entire video production pipeline—including virtual set design, scene expansion, VFX, and editing—to deliver groundbreaking efficiency. Compared to traditional production methods, it reduces production costs by up to 80% and shortens timelines by up to 70%.

This platform redefines the essence of video production, shifting away from high-cost, long-term models toward a smarter, faster, and more accessible system.

Market Opportunity

Traditional commercial video production has long required massive budgets, large teams, and lengthy schedules, making it accessible only to major studios. But we are now in an era where demand for diverse video formats is growing explosively.

AI Studio 48 is designed to meet this shift by enabling:

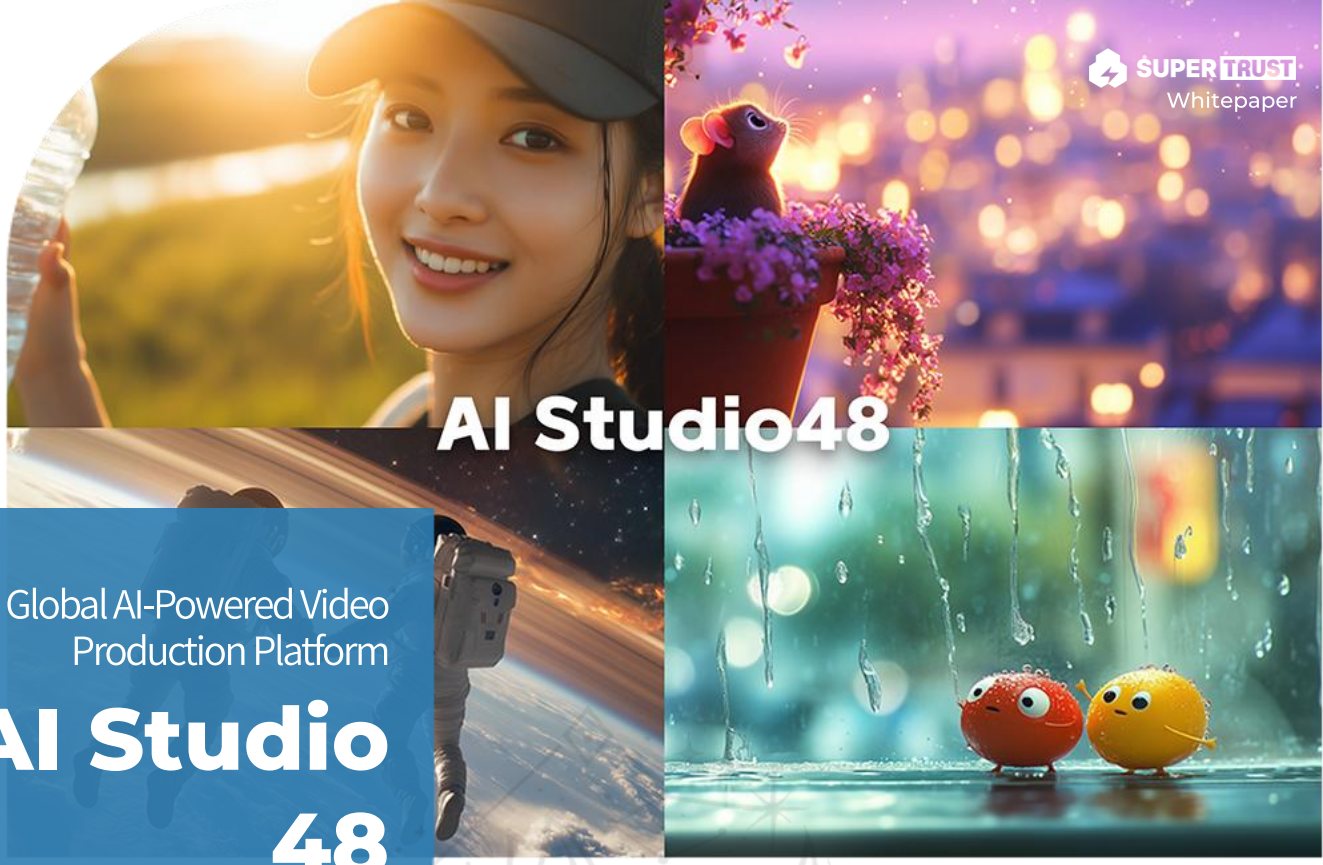

- Small studios, independent creators, advertisers, and educational institutions to produce high-quality content
- Rapid entry into emerging markets such as independent films, short-form content, educational media, and PPL-based advertising videos

Key Strengths

- AI-powered, cost-efficient production workflows
- Commercial-quality video output
- Automated editing, visual effects, facial and voice synthesis
- Built-in global lip-sync and subtitle localization system
- Customizable algorithms optimized for ads and PPL placement

These features guarantee professional content quality while allowing creators to focus entirely on creative expression.

Archived copy · cryp2nova.com

Global AI-Powered Video Production Platform

AI Studio 48

Scalability & Future Outlook

AI Studio 48 is not limited to film production. It is poised to expand into the following areas:

- Commercial and short films
- Advertising and interactive campaigns
- Music videos
- YouTube and short-form content
- Educational and e-commerce content

AI Studio 48 will become the new standard for commercial video production and a core infrastructure in the future of the content industry.

Roadmap

Second Half of 2025

AI Studio 48 will serve as the core production infrastructure for Zero Plus, a budget-oriented OTT platform currently being developed by SuperTrust.

This will empower creators to produce high-quality, AI-generated content quickly and with minimal resources, offering a new level of visual appeal, experimentation, and immersion compared to traditional OTT services.

“AI Studio 48 is more than just a technology tool—it is a platform that redefines the structure of the content industry itself.”

SUT Architecture

Four Layer Structure

SUT consists of four layers : Blockchain platform, Application Programming Interface (API), Service and Admin.

Admin Layer

The information of the user's member and account is encrypted and managed by the key management system. Manag ement functions will be given, such as the establishment of a system such as settlement and compensation for investment, the analysis of the overall function of the platform, and the inquiry and editing of DB of authorization and the operation of services.

Service Layer

The user's direct service is constructed. The flow of services can be implemented through the processing of basic components and data. The flow of the user's request is controlled and the results are sent and received to facilitate access.

API Layer

The support of various APIs supported by the blockchain platform is included, and the API of various platforms is utilized to maximize the utility of the user's experience and service.

Blockchain Layer

Blockchain technology, which provides an environment for development based on the Polygon network platform, will be utilized. Through this technology, safe and convenient development and operating systems are built, and smart contracts, issuance of NFT tokens and wallet management services are provided.
