# Introduction

**Survarium** is a Web3 Play-to-Earn roguelike inspired by hits like **Brotato** and **Vampire Survivors**. The game combines fast-paced action, strategic progression, and blockchain-powered rewards in a fantasy world where survival is everything. Currently in **alpha**, Survarium is laying the foundation for a sustainable economy—soon, players will be able to earn **$SURV tokens** by making progress in the game.

## $SURV Tokenomics

Survarium is built on a transparent and fair economic model that aligns player rewards with the game's long-term vision. Our token distribution supports early adopters, ongoing development, and open market participation:

- **5%** – Reserved for early player rewards
- **5%** – Allocated to marketing efforts and liquidity provider incentives
- **5%** – Team Treasury for game development, marketing, and ecosystem growth
- **85%** – Available for public acquisition via decentralized exchange (DEX) pools

All in-game revenue will be reinvested into the ecosystem—**fueling token burns to reduce supply, boosting marketing campaigns to grow the community, and funding continuous development to keep Survarium evolving**. Every contribution from players directly strengthens the project's future, ensuring a thriving and sustainable economy for all.

We are fully committed to the evolution of Survarium as long as the community remains active. Future **airdrops**, events, and limited-time challenges will further reward loyal and honest players. Any form of cheating will result in a permanent ban and the loss of earned rewards.

Ultimately, the game's future is in your hands. Jump into the chaos, survive the onslaught, and become part of the **Survarium** legend.
