Your Docusaurus site did not load properly.

A very common reason is a wrong site **baseUrl configuration**.

Current configured baseUrl = / (default value)

We suggest trying baseUrl = /D:/Desktop/whitepapers/whitepapers_html/whitepapers/15250_SYN_Synapse.html/

The Next Trillion Dollars of Stablecoins Will Be Built on Options

Vitalik proposed replacing debt and liquidations with option pairs as the base layer for synthetic dollars. We explain the idea from first principles, price it on live Deribit data, and backtest it through nine years of ETH crashes. The missing piece is an options venue.

RPI: The Execution Model Between RFQ and CLOB

The RFQ vs CLOB debate misses the point. RPI gives you a transparent orderbook with a pre-trade auction that guarantees price improvement. Here is how it works, why options need it, and what it means for perps.

SpaceX Paid $10 Billion for a Call Option on Cursor. That's a Great Deal.

The biggest AI deal of the year is a structured option hiding in plain sight. We decompose the SpaceX-Cursor acquisition right into a Black-Scholes framework, back out the implied vol, and compare it to every asset class we can price.

The Generational Oil Roll Happened on Hyperliquid: Why It Couldn't Have Happened Anywhere Else

How a published oracle walk between dated CME contracts turned the April WTI roll into the loudest trade in crypto — and why HIP-3 is the only venue this instrument could have existed on.

Vanilla Options on Top of HIP-4

HIP-4 extends way beyond prediction markets. We are building real vanilla options on Hypercall with native HIP-4 thresholds underneath them and portfolio margin that can finally credit the whole writer hedge stack.

Is AI Cooked?

Semis are crashing, Iran closed the Strait of Hormuz, tariffs are landing, and everyone is asking if the AI trade is over. We looked at the options market. The answer is more interesting than yes or no.
