TAO.BOT

> **Your front-end to Bittensor. trade subnet tokens and analyze the network — ETH ↔ TAO, fast and intuitive.**

TAO.BOT is the easiest way for ETH and native $TAO users to trade Bittensor subnet tokens with a clean, Uniswap-style UI. We pair seamless swaps with a powerful **Explore** — subnet pages, network stats, validator insights, and liquidity tools — so you can discover, analyze, and act in one place. Backed by a top-tier validator and a fast-shipping cadence, we're building toward permissionless wrapped staking for subnet tokens across chains.

What is TAO.BOT?

TAO.BOT is a front-end DEX experience for the Bittensor network. It brings together a **subnet screener**, **token trading**, **liquidity management** (Native TAO), a **portfolio view**, and validator-focused insights — all in one interface. We support two ways to use the app:

- **Native TAO Mode** — Connect a native Bittensor wallet and interact directly on-chain.
- **ETH Entry Gateway** — Deposit supported assets on Ethereum, access subnet markets through our servers, and withdraw anytime.

Explore Subnets

Browse subnet markets, trending tokens, and network KPIs.
↗

Trade

Swap TAO ↔ subnet tokens with clear slippage and price impact.

Key things you can do

- **Explore the network** — Browse subnet pages with price, volume, emissions share, liquidity depth, validator context, and more.
- **Swap tokens** — Trade subnet tokens ↔ TAO with transparent slippage, price impact, and confirmations.
- **Provide liquidity (Native TAO)** — Add/remove concentrated liquidity on supported subnet pools.
- **Track your portfolio** — See balances (TAO, subnet tokens, LP) and activity.
- **Validator insights** — View validator-related context surfaced across subnet pages.

New here? Start with **Quickstart** or scan **Using TAO.BOT**.

Modes at a glance

Mode	How it works	Best for
Native TAO Mode	Connect a native TAO wallet and sign transactions on the Bittensor network.	On-chain users who want direct control
ETH Entry Gateway	Deposit **ETH, USDC, or USDT** on Ethereum, access subnet markets via our servers, and withdraw anytime.	ETH users who want a fast on-ramp to subnet tokens

Wallets: Any native TAO wallet is supported.
Deposits/Withdrawals (Gateway): ETH, USDC, USDT.

Who is this for?

- **Traders** looking for clean subnet token execution
- **Liquidity providers** seeking fees on subnet pools (Native TAO)
- **Subnet operators & community** tracking KPIs, emissions, and validator context
- **Analysts** who want a unified subnet screener for the Bittensor ecosystem

- **Support:** Telegram or **support@tao.bot**

Notes on custody & risk

- **Native TAO Mode** executes directly on the Bittensor network using your connected wallet.
- **ETH Entry Gateway** provides a convenient hosted balance to access subnet markets from Ethereum, with deposits and withdrawals available at any time.
- Markets can be volatile and liquidity can vary; review slippage and route details before confirming trades.
