Executive Summary 03
Overview

A community-driven ERC-20 token deployed on Base.

TAOT, The America Only Token, is a decentralized digital asset built around the community slogan “America First. America Only.” The project emphasizes transparency, accessibility, open development, and broad compatibility with Ethereum infrastructure.

TAOT does not attempt to reinvent blockchain technology. It uses the ERC-20 standard and Base, an Ethereum Layer 2 network, so participants can hold, transfer, and interact with the token through supported wallets, explorers, decentralized exchanges, and applications.

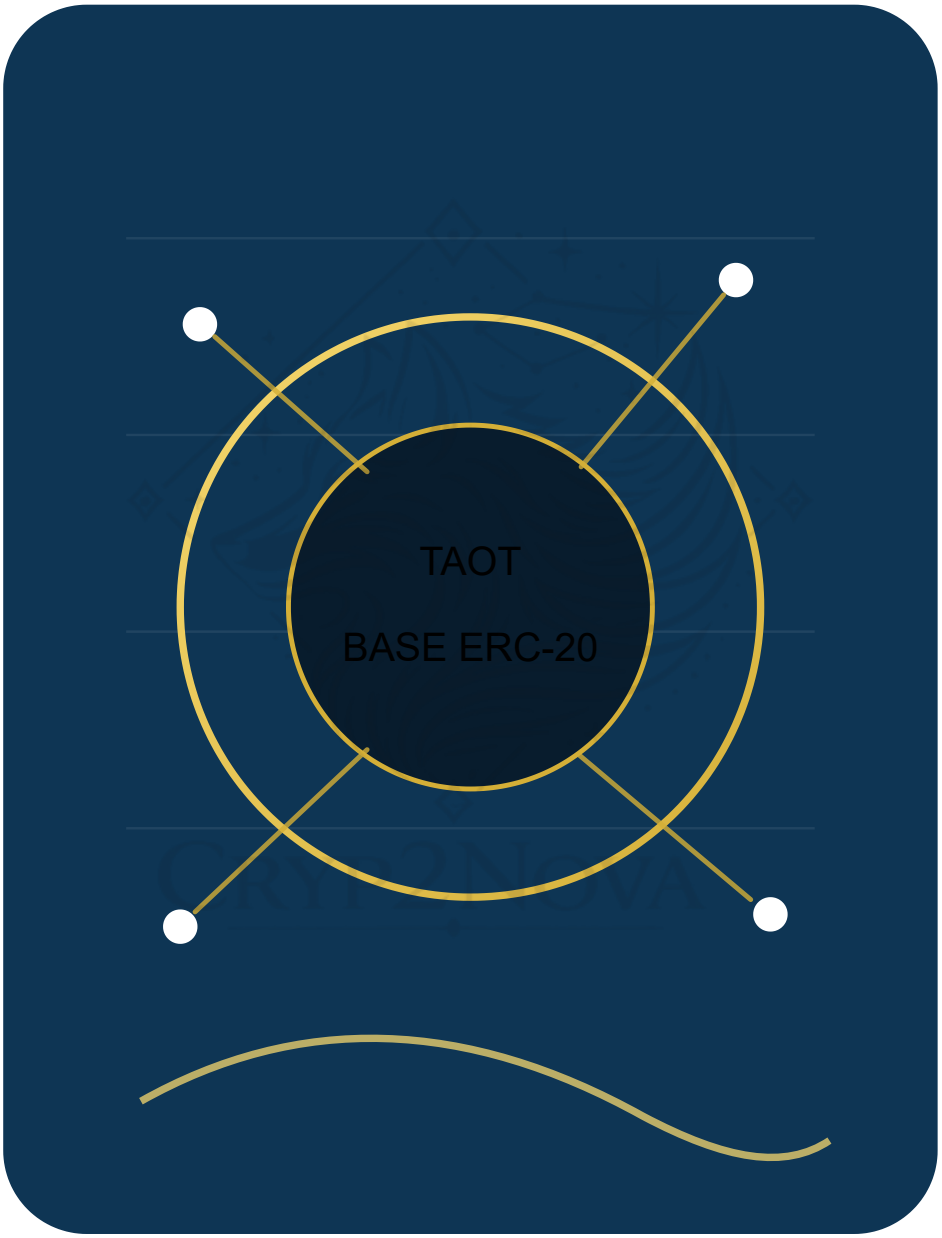

Mission

Archived copy · cryp2nova.com

Build a recognizable digital asset around a strong community identity while maintaining factual communication, transparent public records, and responsible ecosystem development.

Vision

Enable supporters to freely own, transfer, trade, and integrate TAOT into future community initiatives without claims of guaranteed value, returns, or adoption.

Why Base? 04
Architecture

Ethereum settlement, Base execution, TAOT accessibility.

Archived copy · cryp2nova.com

Ethereum

Security foundation and broader EVM ecosystem.

↓
Base

Lower fees, faster confirmations, EVM compatibility, and Coinbase ecosystem reach.

↓
TAOT

ERC-20 token available through supported Base infrastructure.

Low Fees

Base is designed to make common on-chain interactions less expensive than mainnet Ethereum.

Fast Settlement

Participants benefit from rapid confirmations for transfers and supported swaps.

Ethereum Security

Base operates as an Ethereum Layer 2, connecting TAOT to Ethereum-aligned infrastructure.

EVM Compatible

ERC-20 tooling, wallets, explorers, and smart-contract integrations can support TAOT where Base is enabled.

CRYP2NOVA

Coinbase Ecosystem

Base is developed by Coinbase, giving builders and users access to a growing Layer 2 ecosystem.

ERC-20 Standard 05
Compatibility

TAOT follows the most widely supported token interface in Ethereum.

Wallet
Blockchain
Smart Contract
TAOT

Archived copy · cryp2nova.com

ERC-20 defines a consistent set of functions for token balances, transfers, allowances, and smart-contract interactions. Because TAOT uses this standard, supported services can read and interact with the token through established Ethereum-compatible infrastructure.

MetaMask

Self-custody wallet support where Base assets are enabled.

Coinbase Wallet

Base-native wallet access and EVM compatibility.

Ledger

Hardware-wallet workflows through supported Ethereum interfaces.

Trust Wallet

Mobile wallet access for supported Base tokens.

DEXs

Trading where liquidity and platform support are available.

Trackers

Portfolio tools and explorers can display public token data.

Technical Specifications 06

Utility 07
Use Cases

Archived copy · cryp2nova.com

Current utility is grounded in ownership, transferability, and community participation.

TAOT can be held as a digital asset, sent between compatible wallets, traded on supported decentralized exchanges, and used by the community as an identity-aligned token on Base.

Future ecosystem possibilities may include community rewards, educational resources, decentralized applications, online payments, promotional campaigns, integrations, and additional blockchain interoperability. These possibilities are exploratory and depend on development priorities, ecosystem support, and community participation.

Acquire
Hold
Transfer
Trade
Integrate

Transparency

Public smart contracts, verifiable transfers, visible supply data, and explorer access support independent review.

Open Development

Website code, GitHub repositories, and community feedback can help guide ongoing development.

Community

TAOT is centered on a recognizable identity and a participatory ecosystem rather than claims of financial return.

Roadmap 08
Development Path

A practical roadmap that can evolve with the community.

01

Launch

Token deployed on Base with public contract visibility.

02

Archived copy · cryp2nova.com

Community

Expand official channels, education, and participation.

03

Listings

Pursue broader wallet, explorer, and market-data support where eligible.

04

Partnerships

Explore integrations that align with the project identity and standards.

05

Expansion

Improve documentation, website infrastructure, and public repositories.

06

Future Ecosystem

Evaluate applications, interoperability, and community-driven utilities.

Roadmap items describe areas of focus. They are not guarantees of delivery, listing, partnership, adoption, price performance, or future value.

FAQ 09
Questions

Clear answers for holders, reviewers, and platforms.

What is TAOT?

TAOT is The America Only Token, a community-driven ERC-20 cryptocurrency deployed on Base.

Does TAOT represent ownership in a company?

No. TAOT ownership does not represent equity, shares, governance rights, or ownership in any company.

Is TAOT an investment promise?

Archived copy · cryp2nova.com

No. The project does not promise profits, appreciation, income, future listings, or market performance.

Why use Base?

Base offers lower fees, fast confirmations, EVM compatibility, and access to a growing Ethereum Layer 2 ecosystem.

Where can TAOT be verified?

The public token contract and activity can be reviewed on Basescan using the official contract address.

Which wallets can support TAOT?

Ethereum-compatible wallets that support Base assets may support TAOT, including MetaMask, Coinbase Wallet, Ledger workflows, and Trust Wallet.
