Introduction

Copy

Overview

Theo is a full-stack platform connecting onchain capital to global financial markets.

Theo ↗ is building infrastructure for a new kind of financial system: one that makes high-quality assets accessible to anyone, anywhere. In today's world, moving money globally is instant, but flexible access to global markets remains gated behind institutional barriers and legacy systems. At Theo, we believe that must evolve.

Theo bridges this gap by bringing high-quality real-world assets onchain in a way that services everyday users, institutional investors, application builders, and blockchain ecosystems alike.

For Allocators | For Wallets and Neobanks | For Layer-1 Ecosystems

Theo functions as a savings platform for users who are seeking competitive yield on their cash. We provide flexible and transparent yields for any type of investor.

The Vision

Earlier this year, **we announced a $20 million fundraise to accelerate our vision of connecting onchain capital with existing financial systems around the world.**

We’re unlocking access to stable, transparent opportunities that were once limited to institutional investors. Theo is designed to deliver institutional-grade performance and security while allowing these products to remain accessible to anyone.

The Team

Our team comprises former market makers, hedge fund quants, and engineers with dozens of years of experience across companies like Optiver, IMC, Bain Capital, Goldman Sachs, Standard Chartered, and Amazon.

We've built, traded, and operated systems handling billions in daily trading volume. We understand how markets work at scale, and we're applying that experience to build the next generation of onchain financial infrastructure.
