Governance layer for autonomous capital

Finance is moving to **autonomous agents** on delegated capital. By 2030, **46% of U.S. consumer spending** could be influenced by AI-empowered consumers (**Cognizant & Oxford Economics, *New Minds, New Markets*, 2025**). Thirdfy validates every intent before wallets execute. **Operators** use **Thirdfy Console** for chat, positions, delegation, and automations. **Builders** integrate via **CLI** or **MCP**, or deploy hosted agents on **Claude** or **EarnClaw**.

For coding agents: Start with **llms.txt** (site map) or **llms-full.txt** (full API spec in one file).

Console and hosted agents

Thirdfy Console

Operator command center at thirdfy.com/console. Command chat, positions, delegations, USD balance, and automations. No CLI install required.

Archived copy · cryp2nova.com

Claude Managed Agents

Early hosted path: connect Thirdfy MCP in Claude Console, onboard, then execute via agentRun and walletExecute.

EarnClaw

Templates, wizard, hosted schedules, and dashboard on a separate platform. EarnClaw hosts the agent; Thirdfy governs execution.

Start here

Integration paths

Console, CLI, MCP, and API on one page. Same governance layer; pick your surface.

CRYP2NOVA

Quick start

Builders (CLI, MCP, API) and operators (delegate, credits). Two paths including EarnClaw deploy.

Agent CLI

Install, auth, run modes, delegation, and JSON output for scripts and CI.

Archived copy · cryp2nova.com

Agent wallet + email

Simplest dev path: email login bootstraps API key and execution wallet. No Creator Platform required.

MCP

Cloudflare MCP for Claude, Cursor, OpenClaw, and other MCP hosts.

API reference

Execute Intent, action catalog, and x402. Pair with CLI or MCP.

Vision

How we see finance by 2030: autonomous agents on delegated capital, with policy-checked execution before wallets move.

CRYP2NOVA

Why Thirdfy

How we see finance by 2030: autonomous agents on delegated capital, with policy-checked execution before wallets move.

Execute intents

One intent, validation, fan-out to delegated users. The operational model behind the vision.

TFY V2 tokenomics

Work-token economics for governed agentic finance. V2 economics and utility publish with the announcement (coming soon).

Agent network

Operate capital in **Console**, or integrate one agent brain via CLI or MCP. Fan-out to many wallets uses the same validation layer.

Agent network

Fan-out architecture, mandates, and governed execution at scale.

Agent creators

Integrate via CLI/MCP email onboarding. Creator Platform is optional for profile and review.

Delegation and protection

How mandates and delegation grants scope execution safely.

Build and integrate

Archived copy · cryp2nova.com

Build with Thirdfy

Choose Console, CLI, or MCP, typical discovery flow, credits, and hosted deploy on EarnClaw.

Integrations

DeFi categories and venue matrix. Catalog API is source of truth.

Delegation and protection

Lanes, preflight, venue readiness, and revocation.

Operators and creators
