What is Blaze?

Blaze is a novel Ethereum-based DeFi project offering a unique auction-based token minting and staking platform where users fuel their crypto earnings by purchasing batches and staking tokens for rewards over time.

Understanding Blaze

1. **Auction Participation:** Join daily auctions to acquire $Blaze tokens.
2. **Limited Daily Tokens:** A set number of tokens are available each day.
3. **Payment Method for Auctions:** Ethereum.
4. **Staking for Yield:** Stake $Blaze to earn real Ethereum yield.
5. **Decentralized Buy and Burn:** Supports Blaze and TitanX protocol growth.
6. **Fair launch:** Conducted in a way that ensures equality for everyone involved.
7. **Join the Blaze Diamond Club** for access into the 888 day Diamond hands pool.
8. **Blaze Wars NFT Bonus:** 28 Blaze Wars NFT's gives access to the Diamond hand 888 day pool.

Blaze: Sizzling Crypto Feast!

CRYP2NOVA

Blaze is like the digital world's newest crypto barbecue, where Ethereum & TitanX tokens are the charcoal and lighter fluid! You can buy 'batches' to join a daily token minting party - think of it as a group huddle around the crypto fire. Each day, the number of Blaze Tokens being roasted goes down by 0.08%, making it hotter to grab your share.

Fancy a long-term commitment? Stake your Blaze for up to a scorching 2888 days and watch your rewards cook, with a 288% maximum staking bonus if you're patient enough. But beware, there's a twist in the recipe: the ETH you pay for your Blaze stake gets dished out as rewards. When $Blaze is staked or burnt within Blaze Protocol, the tokens are locked and cannot be accessed by others. $Blaze is obtained exclusively through the Ethereum auctions.
