TON & Jetton Privacy pool

Copy

👋TONNEL Network

Privacy on TON & Telegram Using Zero-Knowledge Technology

Overview

Do you believe Transparency is the opposite of Privacy? If so, Mr.Freeman will try to change your mind here.

ZK Technology

Zero-knowledge proof (ZKP) is a protocol that allows you to prove the correctness of a statement without disclosing additional information.

A set of smart contracts that are publicly available on GitHub ensure the safety of your cryptocurrency that passes through TONNEL. Not the development team, nor relayers, will not be able to interfere with the process of depositing or withdrawing funds from the pools. Which makes the pool an absolutely safe place to store tokens and tokens for an unlimited amount of time.

Archived copy · cryp2nova.com

You can read a detailed article ↗ on ZK and how to use it on TON Blockchain in official TON Blockchain documentation, written by the core developer of TONNEL Network.
