Overview

Copy

1. What is Unibase?

Unibase is a high-performance decentralized AI memory layer. It equips AI agents with **long-term memory** and **cross-platform interoperability**, enabling them to **remember**, **collaborate**, and **self-evolve** autonomously.

Unibase is building the foundation for the **Open Agent Internet** — a modular, verifiable, and composable AI agent ecosystem onchain.

2. Project Status

- ✅ **Live** on **BNBChain Mainnet**
- ✅ SDKs, Docs, and Explorer fully released
- ✅ Integrated with **MCP, ElizaOS, Virtuals, and Swarms**
- ✅ 1,000+ agent interactions recorded via Unibase SDK
- ✅ BitAgent, TradingFlow, TwinX, Beeper online

See Status & Maturity for per-module status (live / testnet / in audit).

3. Choose Your Path

I want to...	Start here
Add memory to my Agent	Membase Quick Start
Build multi-agent systems	AIP Quick Start
Enable agent payments	Unibase Pay Quick Start
Run storage/validator nodes	Unibase DA Quick Start
Capture & reuse my AI chats	Unibase Memory

4. Problems Solved

Problem	Unibase Solution
No long-term memory	Membase — persistent, verifiable storage
Isolated agents	AIP — cross-platform identity & interoperability
Data sovereignty	Decentralized storage, on-chain verification

5. Core Modules

Module	One-line
Membase	Agent memory & collaboration SDK — wallet-owned encrypted memory, on-device recall, agent-direct cooperation, on-chain settlement. SDK / MCP / skill.
AIP Protocol	Agent interoperability — identity, permissioning, shared memory. ERC-8004 & x402.
Unibase Pay	x402 on BNB Chain — agents search, pay, access. Privy wallet, micropayments.
Unibase DA	Data availability — erasure-coded, ZK-verified, honest-one fraud proofs, EB+ capacity.
Unibase Memory	Chrome extension — capture, organize & reuse ChatGPT/Claude/Gemini chats. Encrypted, owned, verifiable.

> **Membase vs Unibase Memory: Membase** is the developer **SDK** for building agents with memory & collaboration. **Unibase Memory** is the consumer **Chrome extension** for capturing and reusing your own AI chats (built on the same stack).
