- Overview
- Who is Union built for?
  - Core Values

Union

The Union network is a hyper-efficient zero-knowledge infrastructure layer for general message passing, asset transfers, NFTs, and DeFi. It's based on consensus verification and has no dependencies on trusted third parties, oracles, multi-signatures, or MPC.

Union uses advanced Zero-Knowledge Cryptography and BLS signatures to bring the fastest and most secure inter-blockchain communication protocol, IBC, everywhere.

Who is Union built for?

Section titled "Who is Union built for?"

For those who care about decentralization and reliability, and believe that finance should be accessible for everyone.

Core Values

Section titled "Core Values"

Union is developed to be a scalable powerhouse:

- Fast: bridging transactions are generated and settled quickly.
- Secure: abide by fork-choice rules.
- Future proof: core tech is built for the next decennium.
- Easy to use: high-level API usable for developers from any ecosystem.
