Introduction

Copy

Uniwhale is an oracle-based perpetual DEX where you can trade, with up to 200x leverage, BTC, ETH, and many mainstream crypto assets, directly from your wallet.

As a liquidity provider, you can provide liquidity with stablecoins like USDT, USDC, BUSD, and more, to earn real yield from market-making and leverage trading.

Based on objective price oracles and single-sided liquidity, Uniwhale aims to deliver the best trading experience for traders with zero credit risk and minimize impermanent loss for liquidity providers.

- Oracle-based price execution means zero slippage.
- Single-sided stablecoin liquidity means zero impermanent loss.

- Decentralized on-chain trading experience means zero credit risk.

Uniwhale infrastructure is fully decentralized

- We provide fully decentralized web links. You can run locally if you like.
- Connect through https://uniwhale.co ↗ for speed and convenience.
- Use any IPFS gateway to use the service even when the main website is not accessible.
- Mitigate DDOS attacks.
- Unique CID makes our app immutable, mitigating MITM attacks.
- Censor-proof distribution, we will live no matter what.
