What is NexusMind?

NexusMind is a revolutionary decentralized social software that has been dubbed the "Twitter Killer". The app is built on the cutting-edge decentralized network Nostr, which provides users with greater control over their social media experience. With NexusMind, users can enjoy a more secure and private social networking experience that is not controlled by a central authority. Unlike traditional social media platforms, NexusMind allows users to connect with others in a completely decentralized and transparent manner, ensuring that users remain in control of their data at all times. Additionally, NexusMind offers a wide range of innovative features and tools that enable users to customize their experience to their liking, including customizable profiles, real-time messaging, and advanced privacy settings. With its user-centric design and state-of-the-art technology, NexusMind is poised to revolutionize the world of social media and usher in a new era of decentralized networking.

NexusMind Advantages in brief

Data Ownership

With the foundation of open internet protocols, there is no centralized entity that has the power to restrict or suppress your speech or control over your information.

Decentralized Network

NexusMind operates on a decentralized network, where the data is stored on multiple nodes instead of a single central server. No need to run any infrastructure and there are no single points of failure. This makes the platform more secure and less susceptible to data breaches.

Enhanced Privacy

NexusMind prioritizes privacy, ensuring that users' data is protected and kept confidential. Personal information is not collected, stored or sold, giving you complete control over your online presence.

Community-Driven

NexusMind is a community-driven platform, where you have a say in the direction and development of the platform. This creates a more democratic and inclusive environment, where everyone's voice is heard.

Token-based Ecosystem

NexusMind operates on a token-based economy, where users can earn tokens for their contributions to the platform. This creates a more engaging and rewarding experience, incentivizing users to participate and create content.

Tokenomics

NexusMind aims to provide a platform for users to share and exchange ideas and information in a way that is secure, transparent, and free from censorship and control by a central authority, and provide users with more privacy and control over their data, as well as a more open and democratic platform for expression and communication. NexusMind has two types of tokens.

CRYP2NOVA

- $UNMD is the utility token with fixed supply of 1 billion tokens and could been earned when users contribute on site.
- $NMD is the governance token of NexusMind ecosystem, with a fixed supply of 100 million tokens.

  - Symbol: $NMD
  - Community operations: 20%

- Community treasury: 40%

Roadmap

Phase1

- Implement a basic web client for nostr protocol.
- Encrypted Direct Messages
- The Article Window with reply, like, and remeber capability.

Phase2

- Permanently connected relays mechanism which should restart if they close. Probably a retry algorithm that backs off over time.
- Events from trusted users may suggest relays.
- Add relays from all sources of relay recommendations
- Allow formatting of articles using markdown.

Phase3

- Add search in article tree window.

Archived copy · cryp2nova.com

- Enhance search function searches profiles, messages, subjects, nicknames, pubkeys, ids, tags, etc.
- Implement NIP-08 which mentions of events by allowing the user to right click on an event in the header tree and select "insert reference" from a popup menu.

Phase4

- Show list of trusted users.
- Add keyboard shortcuts.
- Implement un-trust mechanism.
- Implement NIP-12 which allows any single-letter tag present in an event to be queried.
