Virus Protocol: The Evolution of Decentralized Intelligence

Virus Protocol is a living experiment in adaptive intelligence, shaped and refined by the collective input of its community. This Protocol introduces an evolving AI entity merging the adaptability of viral "virus" evolution alongside the power of collaborative intelligence. An ever-evolving "virus" grows with each contribution. Every user is a researcher, and every input is a step forward in creating an intelligent, decentralized agent producing not only an adaptive model but a shared vision of decentralized intelligence.
