What is Volt

Powering a Lightning-Fast deflation with Electrifying buy and burn

Volt, built on TitanX, is a hyper-deflationary token with a unique auction system. It features a capped supply with all tokens distributed in the first 10 days, triggering full deflation afterward. Volt utilizes 80% of system value to buy tokens + 8% of value for growing bonded liquidity growth. Volt enters deflation quickly with a massive buy and burn.

Volt's Pumpamentals:

- Deflationary token
- Huge buy and burn
- Perpetual Auction system
- Full token distribution in 10 days.
- 80% of TitanX value used to buy Volt.
- Liquidity bonding with all titanX tokens
- "The Treasure Volt ↗" ensures perpetual auctions with deflationary tokenomics.
- The "Volt Wheel ↗" amplifies the buy and burn among protocols with synergistic effect
