WINR

The AI casino system.

Archived copy · cryp2nova.com

Create casino games with AI and own their revenue, or back the bankroll behind every game and earn the house edge.

A game becomes a tradeable cashflow asset, not a referral link.

Create games ↗ · Back the bankroll ↗

Create games. Own the revenue.

A prompt becomes a game. The game becomes yours.

Create a casino game with AI, put it onchain, and own a share of the revenue it earns for as long as people play. You hold a position in the game, not an affiliate code.

Explore games ↗

Back the bankroll

One shared onchain bankroll backs every game on WINR, denominated in WINR and owned by its liquidity providers. Provide WINR to the bankroll and earn the house edge from every game creators launch, through a rising share price rather than a separate payout.

Nobody raises or manages their own house. Creators and operators plug into shared liquidity with risk rules enforced in code.

Provide liquidity ↗ · The Bankroll · Liquidity Providers · Revenue Flow · For Operators

ⓘ

No custody. No manual payouts. Verifiable onchain.

How it works

1. Create a casino game with AI and launch it onchain
2. Players play, and every spin settles onchain
3. Revenue routes to the creator and the shared bankroll
4. One bankroll backs every game

Who it’s for

Creators — create a game you own instead of sending players to someone else’s casino.

Archived copy · cryp2nova.com

Operators — run games on shared liquidity with no bankroll to raise.

Liquidity providers — back the house and earn from real play through a rising share price.

Players — play onchain with instant settlement and no custody.
