Blockchain Data

The XDC Network is a secure, scalable third-generation blockchain network with a capacity of up to 2000 transactions per second. It offers high-throughput and low-latency transactions.

XDC Network:
Powered by XDC Protocol

The XDC Network stands as a robust, enterprise-grade blockchain protocol, boasting an open-source framework and powered by the XinFin Delegated Proof of Stake (XDPoS) consensus mechanism. This EVM-compatible chain features enforceable smart contracts, making it a prime candidate to transform the trade finance sector. Through the tokenization of real-world assets and financial instruments, XDC Network aims to revolutionize, decentralize, and enhance liquidity within the industry.
