Full House - Where You're Part of the House

Copy

Introduction to Fullhouse.gg

The Web3 Gaming Platform Where You Are Part of The House

The New Age of Crypto Betting is Here

Fullhouse.gg, a leading crypto casino and sports betting platform started in 2021 and launched in 2024. It has garnered over 30k active users and 10.5 million bets, offering a true top-notch user experience, and offer users a novel way to become part of the house (and its upsides).

Wherein platforms like Stake.com create revenues in the billions of dollars each year, they accrue such value only to the few shareholders they have. While Stake does not offer a native token, it is one of the three largest web3 corporations and creates tremendous value in the market, some even note that almost half of the transactions in web3 are in some way related to gambling (source↗).

While this market is growing exponentially, there have **not** been many casino eco-systems able to accrue value to a token-based community. With aligned incentives and redistribution of wealth instead of accrual to the few at the top. Fullhouse aims to solve this problem and provide every user opportunities to participate in the growth and monetary gains of the platform.

Players who join Fullhouse refer to their former casinos as having poor user experience, mediocre bonusing or native tokens that don't directly enhance their gaming experience. The Fullhouse eco-system runs by the GMX/DyDx playbook, wherein you can not only earn a portion of platform revenues (fees), you can also decide on business decisions together with the core builders. The token is designed to grow alongside the platform, with value accrual that scales with platform use-age. As such, there will be several exciting token utilities inside the dual token model that fuels Fullhouse.gg such as:

- $FH will be used as a wager asset
- $FH will have a buyback-and-burn
- $FH and $YUUKI holders can gain early access to new features, exclusive bonuses and much more
- $FH & $YUUKI will be lockable for native rewards in ETH, BTC and any other currency Fullhouse supports, based on monthly platform revenues.
- $YUUKI holders will get an immense boost to loyalty rewards and leveling.
- $FH will provide any holder rights to vote on decisions and proposals through FH DAO.

CRYP2NOVA

$YUUKI will embark on its distribution path by reaching out to the primary user base of Fullhouse via CreatorBid, the #1 AI Agent launchpad. TLDR:

Archived copy · cryp2nova.com

$YUUKI is a utility based operator, not a simple social chatbot. Here is a number of her technical capabilities:

1. Operate the back-end infrastructure of Fullhouse.gg, she checks deposits for inconsistencies, approves withdrawals lightning-fast and manages KYC procedures.

2. Pay out casino revenue-share payments in tokenized form to those who took excessive risk and took the plunge. Fortune favors the bold.

3. Manage user chats in the global on-site chat and the Discord community. Preventing deceitful entrants and baseless comments.

AI Operator Token Utility (token LIVE on Creator.Bid):

1. Deposit and Lock to gain a high APR that is based on the casino revenues each month!

2. Deposit and Lock to boost your loyalty tier EXP for wagering, so you can blast your way to high rank!

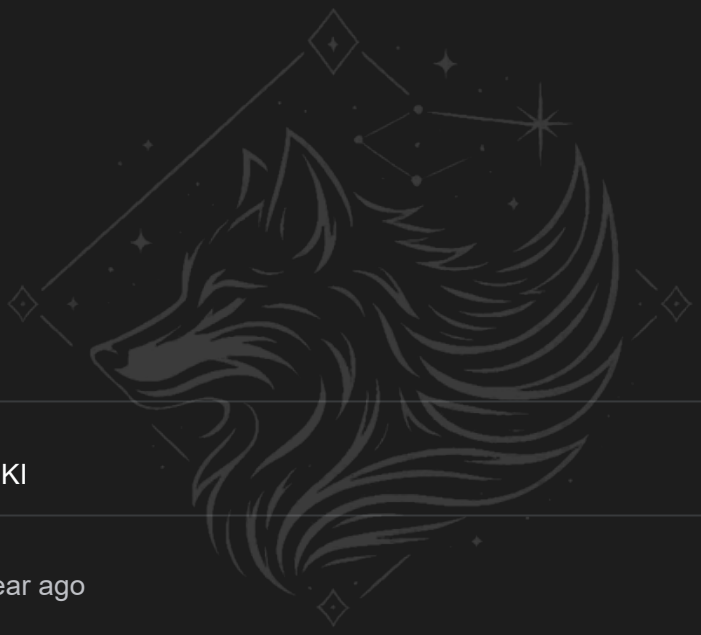

3. Get unique Creatorbid rewards inside the Creatorbid eco-system! For more info visit their site ↗!

Token utilities will be added as Fullhouse matures, with new experiments rolling out on a monthly basis! Please be aware that the Fullhouse V2 release will unlock the new features described above!

Links to external websites for information and trading of $YUUKI will be going live throughout the launch of the token on CreatorBid.

$YUUKI token is tightly integrated with the core platform, reward the most active users, build the community, and take the player experience to new heights. The token is designed to grow alongside the platform, with value accrual that scales as Fullhouse makes the journey to being the premier crypto casino.
