📝Introduction

Zofinity Whitepaper, last updated September 2025

What is Zofinity?

Zofinity is a next-generation DeFi x GameFi ecosystem that connects financial investment with interactive gameplay. At its core, Zofinity allows users to deposit stablecoins into secure smart contracts and receive ZO tokens in return. The ZO token functions as the central utility asset of the platform, enabling users to earn rewards and access many features within the ecosystem.

Our Vision

We envision a world where wealth creation is no longer limited by traditional financial systems. We understand that long-term investing is difficult because it requires high discipline and persistence. Zofinity was created to combine the safety of stablecoin-based returns and a stable buyback model with the fun and creativity of gamefi mechanics. By merging defi and gamefi, Zofinity makes long-term investing easier and more enjoyable, avoiding boredom.

Why Zofinity?

Unlike popular GameFi projects that rely heavily on speculation, Zofinity is built on a foundation of value backed by stablecoins combined with a transparent buyback model, helping long-term sustainability and reducing risk. Through integrating defi to generate real returns and enjoyable gamefi, users can bring real returns through the fun farm game mechanism. Income is generated from a dual model:

- Base APY from stablecoin farming;
- Additional rewards from NFT-driven gameplay.
  Helping long-term investing become easier and rewards higher.
